

Academic Programs

Department of B. Tech CSE (Artificial Intelligence & Machine Learning)

Programme Educational Objectives (PEOs):

PEO-1: Analyze, design, and implement solutions to the chosen field of profession for a successful career. (Professional accomplishment)

PEO-2: Pursue higher education for professional development or career paths in research. (Continuing Education)

PEO-3: Function effectively in the workplace with demonstrable attributes like leadership, lifelong learning, work with teams towards the accomplishment of society needs with ethical responsibility. (Attitudes)

PEO-4: Adapt, contribute, and innovate new technologies with good soft skills to become successful entrepreneurs.

Programme Specific Outcomes (PSOs):

On successful completion of the program, the graduates of B. Tech CSE (Artificial Intelligence & Machine Learning) will be able to:

PSO-1: Apply the knowledge of Artificial Intelligence & Machine Learning principles to solve complex engineering problems which are cost effective and find appropriate solutions to build and design intelligent systems.

PSO-2: Monitor and adopt to consistently changing Artificial Intelligence & Machine Learning landscape for futuristic challenges to meet specific needs of the society

PSO-3: Understand, design, and implement the concepts of Artificial Intelligence & Machine Learning to build intelligent models and systems that are meeting industry 4.0 standards with ethical values.

Program Outcomes (POs):

The graduates of B. Tech CSE (Artificial Intelligence & Machine Learning) will be able to:

Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an

engineering specialization to the solution of complex engineering problems.

Problem analysis: Identify, formulate,

review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design

solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions for complex problems.

Modern tool usage: Create, select, and

apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

The engineer and society: Apply reasoning

informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Environment and sustainability: Understand

the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Ethics: Apply ethical principles and commit

to professional ethics and responsibilities and norms of the engineering practice.

Individual and team work: : Function

effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on

complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Department of B. Tech CSE (Internet of Things)

PEO-1: Practice the engineering skills in
the profession of Internet of Things (IoT) to identify and
solve contemporary problems. (Foundation)

PEO-2: Exhibit leadership capability with
ethical and professional behavior through a lifelong
learning attitude.
(Lifelong Learning)

PEO-3: Promote Design, Research and
Entrepreneurial skills to Support the growth of country
economy.
(R&D and Entrepreneur)

On successful completion of the program, the graduates of :

B. Tech CSE (Internet of Things)
will be able to:

PSO-1: Understand the fundamental concepts
of Computer Science & Engineering with specialization in IoT
and aligned mezzanine technologies.

PSO-2: Design and Integrate hardware and
software systems in the areas of IoT with a strong emphasis
on lifelong learning to create feasible engineering
solutions

PSO-3: Analyze, Design, Implement, Test
and Deploy smart applications related to industry and
research for the advancement of society.

The graduates of

B. Tech CSE (Internet of Things)
will be able to:

Individual and team work: Function
effectively as an individual, and as a member or leader in
diverse teams, and in multidisciplinary settings.

Project management and finance: Demonstrate
knowledge and understanding of the engineering and
management principles and apply these to one's own work, as
a member and leader in a team, to manage projects and in
multidisciplinary environments.

Life-long learning: Recognize the need for
and have the preparation and ability to engage in
independent and life-long learning in the broadest context
of technological change.
