

Department Overview

Department of Physics

The Department of Physics is dedicated in providing the essential components of engineering education through a strong scientific foundation by offering Applied Physics, Engineering Physics, and Physics for Computing Science courses for various engineering disciplines. In addition to standard courses, the department also provides elective courses in emerging fields such as Quantum Computing and Nanotechnology. The students are encouraged to undertake their minor and major projects in these cutting-edge technologies, to gain valuable exposure through research activities. The department is equipped with academic laboratories for undergraduate engineering courses and specialized research centres focused on Nanotechnology, Battery Technology and Multifunctional materials. The faculty of physics are well experienced professionals with doctoral degrees from premier institutions across the country. They also secured sponsored projects from external funding agencies such as AICTE, DST-SERB, DAE, DST-TARE, UGC and DRDO etc., focusing on emerging functional materials.

--- Head of Department ---
