

Academic Programs

PEOs, POs and PSOs

B.Tech EIE

Program Educational Objectives (PEOs)

The student in Electronics and Instrumentation Engineering
will be able to:

To provide students with a solid foundation in Mathematics,
Sciences, Electronics, and Instrumentation Engineering which
prepares students for wide range of career opportunities in
Industries, Research, and Academics.

To train the students with good engineering breadth to
comprehend, analyse, innovate, and design new products in
core and multidisciplinary domain, to provide technical
solutions and services to the needs of the society

To provide students with an academic environment of
excellence, proactiveness, and lifelong learning for
successful professional career.

To inculcate professional and ethical attitude, effective
presentation skills and enhanced ability to work in
multidisciplinary teams to pursue complex, open-ended
investigations and research.

To motivate students towards becoming entrepreneurs,
collaborators, and innovators, leading, or participating in
efforts to address social, technical, and business
challenges.

Program Outcomes (POs)

Engineering Knowledge: Apply the knowledge
of mathematics, science, engineering fundamentals, and an
engineering specialization to the solution of complex
engineering problems.

Problem Analysis: Identify, formulate,
research literature, and analyze complex engineering
problems reaching substantiated conclusions using first
principles of mathematics, natural sciences, and engineering
sciences.

Design/Development of Solutions: Design
solutions for complex engineering problems and design system
components or processes that meet the specified needs with
appropriate consideration for the public health and safety,
and the cultural, societal, and environmental
considerations.

Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including

Electronics Instrumentation Engineering

design of experiments, analysis, and interpretation of data, and synthesis of the information to provide valid conclusions.

Modern Tool Usage: Create, select, and

apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

The Engineer and Society: Apply reasoning

informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Ethics: Understand the impact of the

professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Ethics: Apply ethical principles and commit

to professional ethics and responsibilities, and norms of the engineering practice.

Individual and Teamwork: Function

effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on

complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Project Management and Finance: Demonstrate

knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Life-Long Learning: Recognize the need for

and have the preparation and ability to engage in independent and life-long learning (LLL) in the broadest context of technological change.

Program Specific Outcomes (PSOs)

Specify, design, prototype and test electronic systems that

perform processing as per user requirements using contemporary devices and technology.

Architect and implement instrumentation systems for

Electronics Instrumentation Engineering

industrial processes and biomedical applications using appropriate technologies.

Develop hardware and software tools/ programs used in industrial and other automation systems.

M.Tech EIE

1. To Excel in professional career and/or higher education by acquiring knowledge in measurements, transduction, and instrumentation engineering principles.
2. To enhance knowledge to design & develop advanced instrumentation and automation systems for remote monitoring and control applications.
3. To analyze real life problems, design data acquisition systems with computing platforms appropriate to Electronics and Instrumentation that are economically feasible and acceptable.
4. To acquire soft skills through teamwork, presentations, seminar, and dissertation.
5. To serve research and development organizations to solve the problems raised in the industries and society and involve in lifelong learning.

To independently carry out research /investigation and development work to solve practical problems.

To write and present a substantial technical report/document.

To demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

To identify suitable sensors and transducers for real time applications.

To Acquire knowledge of Instrumentation Engineering with ability to evaluate, analyze and synthesize problems related to process oriented industries.

To use innovative technologies, skills and modern engineering tools to carry out projects related to real-life applications like Robotics, Analytical and Biomedical instruments.

To Acquire knowledge of Instrumentation Engineering with ability to evaluate, analyze and synthesize problems related to process-oriented industries.

To use innovative technologies, skills, and modern engineering tools to carry out projects related to real-life applications like Robotics, Analytical and Biomedical

instruments.
