

## About Department

### About the Department

The Department of Mathematics and Management Sciences, with highly qualified and experienced faculty, focuses on providing a strong mathematical foundation tailored to engineering applications and developing business acumen. Its curriculum and research activities are specifically designed to support the analytical, problem-solving, computational, business, and entrepreneurial skills engineers need across disciplines. Our experienced faculty, with academic and research expertise from prestigious institutions like NIT, IIT, and various state universities, is central to this mission. The Department offers Applied Mathematics in Artificial Intelligence, Statistical Methods for Data Science, Mathematical Foundations of Artificial Intelligence as open electives and Essential Mathematics for Machine Learning as professional Elective. Also our department offers BBA Business Analytics, BFSI, Innovation and Entrepreneurship minor degrees and open electives like Personal Finance and Tax Planning, HRM, Marketing Management. Overall, the Department of Mathematics and Management Sciences is geared towards equipping students with real-time, high-demand Mathematical and Management skills that are directly applicable to engineering challenges.

### Vision

To build a centre of excellence of an international repute in research, training, and education in the disciplines of Mathematics and Management and to inculcate higher order thinking skills to meet the needs of industry and society.

### Mission

To attract students by providing a learning environment where they can develop and cultivate critical thinking, innovative, and leadership skills to solve real-world problems.

### Goals & Objectives

Design and implement an interdisciplinary curriculum that integrates advanced mathematics and management concepts to prepare students for diverse professional roles.

Support and promote research projects that focus on the application of mathematical and management principles to solve industry and societal challenges.

Incorporate experiential learning methods such as case studies, real-world projects, and simulations to strengthen students' critical thinking and problem-solving abilities.

Establish industry partnerships and global collaborations to expose students to current industry trends and enhance their

## **Mathematics and Management Sciences**

practical knowledge and skills.

Embed ethical and sustainable practices into the curriculum to

foster leadership with a focus on responsible decision-making  
and social impact.
