

DEPARTMENT OF

**ELECTRONICS AND
COMMUNICATION
ENGINEERING**

VISION OF THE DEPARTMENT

A resource centre of academic excellence for imparting technical education with high pattern of discipline through dedicated staff which shall set global standards, making National and International students technologically superior and ethically strong, who in turn shall improve the quality of life.

MISSION OF THE DEPARTMENT

- To provide quality education in the domain of Electronics and Communication Engineering through effective learner centric process.
- To provide industry specific best of breed laboratory facilities beyond curriculum to promote diverse collaborative research for meeting the changing industrial and societal needs.

B. TECH.
(ELECTRONICS AND COMMUNICATION
ENGINEERING)

B. TECH. (ECE)

PROGRAM EDUCATIONAL OBJECTIVES

PEO-I: Build a solid foundation in Mathematics, Science and Engineering principles to analyze, model and solve complex engineering problems effectively.

PEO-II: Apply scientific and engineering knowledge with professional competence to design innovative products and offer solutions for industry-specific and real-time problems.

PEO-III: Pursue lifelong learning and professional advancement through higher education, research and continuous upskilling in emerging technologies.

PEO-IV: Exhibit leadership qualities, entrepreneurial abilities and ethical values to provide sustainable solutions for societal needs.

B. TECH. (ECE)

PROGRAM OUTCOMES

PO-1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.

PO-2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4).

PO-3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5).

PO-4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

PO-5: Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including

prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6).

PO-6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7)

PO-7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9).

PO-8: Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO-9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO-10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO-11: Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii)

adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8).

B. TECH. (ECE)

PROGRAM SPECIFIC OUTCOMES

PSO-1: Design and implement application-specific electronic systems in the domains of Analog and Digital circuits, Communications, Signal Processing and Image Processing

PSO-2: Demonstrate computational and programming skills to effectively analyze and solve engineering problems

PSO-3: Develop innovative, reliable and sustainable engineering solutions in the fields of communication, VLSI and embedded technologies to meet societal and industrial needs

EVALUATION SCHEME				
SE	CA	ELA	SEE	TOTAL
30	05	05	60	100

COURSE PRE-REQUISITES: Mathematical knowledge at Pre-University level

COURSE OBJECTIVES:

- To learn the concept of a rank of the matrix and applying this concept to check the consistency of a system of linear equations
- To learn the concept of eigen values and eigen vectors and to reduce the quadratic form to canonical form
- To know the geometrical approach to the mean value theorems and their application to the mathematical problems
- To find the maxima and minima of function of two and three variables
- To evaluate multiple integrals and their applications

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Compute the rank of a matrix and analyze the solution of a system of linear equations

CO-2: Calculate the Eigenvalues and Eigen vectors and Reduce the quadratic form to canonical form using orthogonal transformations

CO-3: Solve the applications on the mean value theorems

CO-4: Find the extreme values of functions of two and three variables with/ without constraints

CO-5: Evaluate the multiple integrals and apply the concept to find areas, volumes

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3
CO-1	3	2	2	1	1	1	1	-	2	1	2	2	3	-
CO-2	3	2	2	1	2	1	1	-	2	1	2	2	3	-
CO-3	3	2	2	1	1	1	1	-	2	1	2	2	3	-
CO-4	3	2	2	1	2	1	1	-	2	1	2	2	3	-
CO-5	3	2	2	1	2	1	1	-	2	1	2	2	3	-

UNIT-I:

Matrices: Rank of a matrix by Echelon form and Normal form – Inverse of Non-singular matrices by Gauss-Jordan method. System of linear equations: Solving system of Homogeneous and Non-Homogeneous equations, Gauss Seidel Iteration Methods.

UNIT-II:

Eigenvalues and Eigenvectors: Eigenvalues – Eigenvectors and their properties – Diagonalization of a matrix – Cayley-Hamilton Theorem (without proof) – finding inverse and power of a matrix by Cayley-Hamilton Theorem – Quadratic forms and

Nature of the Quadratic Forms – Reduction of Quadratic form to canonical forms by Orthogonal Transformation.

UNIT-III:

Single Variable Calculus: Limits and Continuous function and its properties. Mean value theorems: Rolle's theorem – Lagrange's Mean value theorem with their Geometrical Interpretation and applications – Cauchy's Mean value Theorem – Taylor's Series (All the theorems without proof).

Curve Tracing: Curve tracing in cartesian and polar coordinates

UNIT-IV:

Partial Differentiation and Its Applications: Definitions of Limit and continuity – Partial Differentiation: Euler's Theorem – Total derivative – Jacobian – Functional dependence & independence. Applications: Maxima and minima of functions of two variables and three variables using method of Lagrange multipliers.

UNIT-V:

Multiple Integrals: Evaluation of Double Integrals (Cartesian and polar coordinates) – change of order of integration (only Cartesian form) – Change of variables for double integrals (Cartesian to polar). Evaluation of Triple Integrals – Change of variables for triple integrals (Cartesian to Spherical and Cylindrical polar coordinates). Applications: Areas by double integrals and volumes by triple integrals.

COURSE PRE-REQUISITES: 10 + 2 Physics

COURSE OBJECTIVES:

- To explore the working and applications of lasers and fibre optics in modern technology
- To understand fundamental concepts of quantum mechanics and their applications in solids
- To explain various types of semiconductors, semiconductor devices and nanomaterials
- To learn the properties and applications of dielectric and magnetic materials
- To introduce quantum computing principles and quantum gates

COURSE OUTCOMES: After completion of the course, the student should be able to
CO-1: Explain the principles of lasers and fibre optics and their applications in communication and sensing

CO-2: Apply quantum mechanical principles to explain particle behaviour and energy band formation in solids

CO-3: Identify the role of semiconductor devices and nanomaterials in science and engineering applications

CO-4: Classify magnetic and dielectric materials and explain their properties, synthesis, and applications

CO-5: Understand quantum computing concepts and quantum gates

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO-5	3	3	1	2	1	-	1	-	-	1	1	-	-	-

UNIT-I:

Laser and Fibre Optics: Introduction to laser, characteristics of laser, Einstein coefficients and their relations, metastable state, population inversion, pumping, lasing action, Ruby laser, He-Ne laser, Semiconductor laser, applications: Bar code scanner, LIDAR for autonomous vehicle.

Introduction to fibre optics, total internal reflection, construction of optical fibre, acceptance angle, numerical aperture, classification of optical fibres, losses in optical

fibre, applications: optical fibre for communication system, sensor for structural health monitoring.

UNIT-II:

Quantum Mechanics and Band Theory of Solids: Introduction, de-Broglie hypothesis, Heisenberg uncertainty principle, physical significance of wave function, postulates of quantum mechanics: operators in quantum mechanics, eigen values and eigen functions, expectation value; Schrödinger's time independent wave equation, particle in a 1D box.

Introduction to Band theory, Bloch's theorem (qualitative), Kronig-Penney model (qualitative): E-k diagram, effective mass of electron, formation of energy bands, classification of solids.

UNIT-III:

Semiconductors & Nanotechnology: Intrinsic and Extrinsic Semiconductors (Qualitative), Hall Effect-Hall coefficient and its applications, Direct and Indirect band gap semiconductors, Construction, Working principle, V-I characteristics and applications of LED and Solar Cell.

Introduction to nanoscience and nanotechnology, surface to volume ratio, quantum confinement, synthesis methods: Ball milling, sol-gel method, Characterization Techniques: X-ray diffraction (XRD)- calculation of average crystallite size using Debye Scherrer's formula and Scanning Electron Microscopy (SEM), applications of nanomaterials.

UNIT-IV:

Dielectric and Magnetic Materials: Introduction to dielectric materials, types of polarization (qualitative): electronics, ionic & orientation; ferroelectric, piezoelectric, pyroelectric materials and their applications: Ferroelectric Random-Access Memory (Fe-RAM), load cell and fire sensor.

Introduction to magnetic materials, classification of magnetic materials, hysteresis, Weiss domain theory of ferromagnetism, soft and hard magnetic materials, applications: magnetic hyperthermia for cancer treatment, magnets for EV, Giant Magneto Resistance (GMR) device.

UNIT-V:

Quantum Computing: Introduction, concept of quantum computer, classical bits, Qubits, multiple Qubit system, quantum computing system for information processing, Dirac's Bra and Ket notation and their properties.

Hilbert space, Bloch's sphere, introduction to entanglement and Quantum gates, challenges and advantages of quantum computing over classical computation.

EVALUATION SCHEME				
SE	CA	ELA	SEE	TOTAL
30	05	05	60	100

COURSE OBJECTIVES:

- To relate basics of programming language constructs and problem-solving techniques
- To classify and implement control structures and derived data types
- To analyze and develop effective modular programming
- To construct mathematical problems and real time applications using C Language

COURSE OUTCOMES: After completion of the course, the student should be able to
CO-1: Design solutions for the given problem statements

CO-2: Develop programs using language specific constructs for solving computational problems efficiently

CO-3: Apply the modular approach for solving real time problems

CO-4: Process diverse data using derived types along with user-defined types

CO-5: Demonstrate input/output operations and error management for persistent data storage and retrieval

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO-5	3	2	3	1	3	1	1	-	1	-	1	-	3	-

UNIT-I:

Introduction to Programming: Compilers, compiling and executing a program. Representation of Algorithm, Flowchart/ Pseudocode with examples, Program design and structure of C programming. Variables, Data types, Operators and expressions, precedence and associativity, Expression evaluation, type conversion.

I/O: Simple input and output with scanf() and printf(), formatted I/O.

Conditional Branching: Branching with if, if-else, nested if-else, else-if ladder, switch case.

UNIT-II:

Loops, Arrays, Strings:

Loops: Iteration with while, do-while, for, and Nested loops. Jump statements: break, continue, goto, and return.

Arrays: Single dimensional and Multidimensional arrays, Declaring, Initializing, accessing and manipulating elements of arrays.

Strings: Introduction to strings, handling strings as array of characters, string built-in functions, array of strings.

UNIT-III:

Searching, Sorting, Functions:

Searching: Linear search and Binary search techniques.

Sorting: Basic algorithms to sort array of elements (Bubble, Insertion and Selection sort algorithms), Basic concept of order of complexity through the example programs

Functions: Designing structured programs, declaring a function, Signature of a function, Parameters and return type of a function, passing parameters to functions. Recursion with examples. C library functions, Storage classes.

UNIT-IV:

Structures and Pointers:

Structures: Defining structures, initializing structures, unions, Array of structures, Bit Fields.

Pointers: Defining pointers, Pointers to Arrays, Strings and Structures, Passing arrays and structures to functions. Dynamic memory allocation, self-referential structures.

UNIT-V:

Preprocessor Directives and File Handling in C:

Preprocessor Directives: Symbolic constants, macro expansion and file inclusion. User Defined Data Types: enum, typedef.

Files: Text and Binary files, file input/output operations, stdin, stdout and stderr. Error Handling in Files, random access of files, command line arguments.

TEXT BOOKS:

1. The C Programming Language, Brian W. Kernighan and Dennis M. Ritchie, Prentice Hall of India
2. C Programming and Data Structures, B. A. Forouzan and R. F. Gilberg, 3rd Edition, Cengage Learning
3. C: The Complete Reference, Herbert Schildt, 4th Edition, McGraw-Hill

TEACHING SCHEME		
L	T/P	C
3	0	3

EVALUATION SCHEME				
SE	CA	ELA	SEE	TOTAL
30	05	05	60	100

COURSE PRE-REQUISITES: Mathematics, Physics

COURSE OBJECTIVES:

- To understand the basic concepts of circuit analysis
- To apply network theorems for circuit analysis
- To analyze single phase AC circuits and response
- To understand basic concepts of magnetic circuits

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Apply basic concepts for analyzing electrical circuits

CO-2: Understand the network theorems applied for different applications

CO-3: Analyse AC circuits along with resonance phenomenon

CO-4: Analyse the magnetic circuit with electrical circuit analogy

COURSE ARTICULATION MATRIX:

CO-4	3	3	3	2	1	1	1	1	1	1	1	3	2	-

UNIT-I:

Elementary Circuit Concepts:

Circuits: Circuit Concept – Types of Elements-R-L-C parameters – Voltage and Current sources – Independent and dependent sources Source transformation – Voltage – Current relationship for passive elements. Kirchhoff's laws – network reduction techniques – series, parallel, series parallel connections, Star/Delta transformation.

UNIT-II:

Mesh and Nodal Analysis:

Mesh Analysis: Circuits with Independent and Dependent Voltage and current sources, Super Mesh Analysis- problems Nodal analysis: Circuits with Independent and Dependent Voltage and current sources, Super Node Analysis – problems.

UNIT-III:

Network Theorems: Superposition theorem, Reciprocity theorem, Thevenin's theorem, Norton's theorem, Maximum Power Transfer theorem, and Compensation theorem for D. C. excitation, Duality and Dual networks.

UNIT-IV:

Single Phase AC Circuits: R. M. S, Average values and form factor for different periodic wave forms, Concept of phasor, Phase and Phase difference, Rectangular and Polar form representation, Steady state analysis of series, parallel and series parallel combinations of R, L and C with sinusoidal excitation, Concept of Reactance, Impedance, Susceptance and Admittance, Complex power, Real and Reactive powers, Power factor, numerical problems.

Resonance: series and parallel circuits, concept of band width and Q factor.

UNIT-V:**Two Port Networks and Filters**

Two Port Networks: Impedance Parameters, Admittance Parameters, Hybrid Parameters, Transmission (ABCD) Parameters, Conversion of one Parameter to another, Conditions for Reciprocity and Symmetry, Interconnection of Two Port networks in cascade configuration

Filters: Classification of Filters: Low Pass, High Pass, Band Pass, Stop Band Filters.

TEACHING SCHEME		
L	T/P	C
3	0	3

EVALUATION SCHEME				
SE	CA	ELA	SEE	TOTAL
30	05	05	60	100

COURSE PRE-REQUISITES: Basic English

COURSE OBJECTIVES:

- To enhance vocabulary through word formation processes
- To read and comprehend different kinds of texts
- To write clear, concise paragraphs, essays, and letters to produce appropriate technical prose
- To improve coherence and cohesion in writing and speaking
- To recognize and practice the use of rhetorical elements necessary for the successful practice of scientific and technical communication

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Use vocabulary contextually and effectively in oral and written communication

CO-2: Demonstrate an understanding of the rules of functional Remedial Grammar and sentence structures

CO-3: Demonstrate improved competence in Standard Written English, including Remedial Grammar, sentence and paragraph structure, and coherence, and use this knowledge to accurately communicate technical information

CO-4: Apply principles of writing while developing paragraphs, essays, letters and technical prose

CO-5: Employ appropriate rhetorical patterns of discourse in scientific and technical communication

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO-5	1	1	1	1	-	2	1	1	2	2	1	1	1	1

UNIT-I:

1. **Reading:** -The Generation Gap' by Benjamin M. Spock
The Lotos Eaters – Alfred Tennyson, The Land of High Passes – Bhagyalakshmi Krishnamurthy
2. **Grammar:** Degrees of comparisons, Conjunctions, and Prepositions – Identifying Common Errors
3. **Vocabulary:** Word Formation (Affixation, Compounding, Conversion, Blending, Borrowing)

4. **Writing:** Punctuation, Clauses and Sentences, Transitional Devices, Paragraph Writing- Process

UNIT-II:

1. **Reading:** Emerging Technologies
Medicate – Oleksandr Gorpynich & Of Studies – Francis Bacon
2. **Grammar:** Articles Noun-Pronoun Agreement; Concord
3. **Vocabulary:** Word Formation (Prefixes, Suffixes, Root Words)
4. **Writing:** Essay Writing -Descriptive, Argumentative, Expository

UNIT-III:

1. **Reading: Leisure- William Henry Davies -Be Thankful - Unknown Author**
The Rising of the Moon – Lady Gregory, With The Photographer – Stephen Leacock
2. **Grammar:** Misplaced Modifiers
3. **Vocabulary:** Synonyms and Antonyms
4. **Writing:** Letter Writing- Formal Letter Writing– Letter of Complaint, Letter of Requisition, Email Writing, Email Etiquette

UNIT-IV:

1. **Reading:** -Why a Start-Up Needs to Find its Customers First'- Pranav Jain
Too dear – Leo Tolstoy & Shooting an Elephant – George Orwell
2. **Grammar:** Clichés, Redundancies
3. **Vocabulary:** Common Abbreviations
4. **Writing:** Summary Writing, Job Application, Resume Writing

UNIT-V:

1. Reading: '**Professional Ethics**'
2. Patterns of Writing: Comparison and Contrast
3. Patterns of Writing: Cause and Effect Paragraphs
4. Patterns of Writing: Classification Paragraph
5. Patterns of Writing: Problem–Solution Pattern of Writing

TEXT BOOKS:

1. Board of Editors, English for the Young in the Digital World, Orient Black Swan, 2025
2. Unlocking English: A Skill-Based Approach for Language Proficiency, cangage Publications, 2025

TEACHING SCHEME		
L	T/P	C
0	2	1

EVALUATION SCHEME					
D-D	PE	LR	CP	SEE	TOTAL
10	10	10	10	60	100

COURSE OBJECTIVES:

- To explore the working principles of lasers and optical fibers through hands-on experiments
- To analyze the characteristics of semiconductors and devices
- To study resonance and magnetic induction in electromagnetic systems
- To synthesize the magnetic materials and study magnetic, dielectric properties of materials
- To develop skills in data analysis, interpretation, and scientific reporting

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Verify laser and optical fibre parameters through experimental study

CO-2: Characterize semiconductors and devices such as LED, laser diode etc

CO-3: Demonstrate resonance phenomena and realize tangent law of magnetism

CO-4: Synthesize magnetite nanomaterial, analyse magnetic and dielectric properties of materials

CO-5: Apply scientific methods for accurate data collection, analysis, and technical report writing

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

LIST OF EXPERIMENTS:

(Any 8 experiments are to be performed)

- Determination of wavelength of a laser using diffraction grating.
 - Study of V-I & L-I characteristics of a given laser diode.
- Determination of numerical aperture of a given optical fibre
 - Determination of bending losses of a given optical fibre.
- Synthesis of magnetite (Fe₃O₄) powder using sol-gel method
- Determination of energy gap of a semiconductor.
- Magnetic field along the axis of current carrying coil – Stewart and Gee
- V-I characteristics of LED.

7. Study of B-H curve of a ferro magnetic material.
8. Study of P-E loop of given ferroelectric crystal.
9. Determination of dielectric constant of a given material.
10. Determination of frequency of AC mains using sonometer.

0	2	1

EVALUATION SCHEME					
D-D	PE	LR	CP	SEE	TOTAL
10	10	10	10	60	100

INTRODUCTION:

The aim of the English Language and Communication Skills Lab (ELCS Lab) is to develop the communicative skills of learners to function productively in academic and professional settings. This course focuses on developing Listening Skills, Reading Skills, Speaking Skills, Information transfer, Vocabulary, and pronunciation.

Professional students need reading strategies to explore scientific information and process the information. Further, they need to present and share this information in speaking and/or writing with their peers and scientific community. In addition to these, they also need good vocabulary for the presentation of their ideas. Practice is given not only in processing information to identify main ideas and relevant facts, to compare and contrast information and finally draw conclusions but also in presenting the same in speaking and writing.

COURSE OBJECTIVES:

- To train students to use neutral accent through phonetic sounds, symbols, stress and intonation
- To provide practice in vocabulary usage & grammatical construction
- To provide ample practice in LSRW skills and train the students in oral presentations, public speaking, role play, and situational dialogue
- To provide practice in defining technical terms and describing processes
- To equip students with excellent writing skills and information transfer skills

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Speak fluently with a neutral accent

CO-2: Use contextually apt vocabulary and sentence structures

CO-3: Make Presentations with great confidence

CO-4: Define technical terms and describe processes

CO-5: Write accurately, coherently, and lucidly

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)

CO-5	1	2	1	2	2	2	2	1	3	3	3	-	-	-

LIST OF EXPERIMENTS:

UNIT-I:

CALL

1. Common errors with Speech Sounds – Identify elements of Mother Tongue Influence,
2. Listening Skills – Types of Listening- Barriers – Active Listening Practice
3. Reading Skills -Skimming & Scanning-Reading for Gist -Reading for Specific Details

Oral Communication Lab:

1. Non-Verbal Communication
2. Formal and Informal English, Small Talk
3. Greetings – Introducing oneself & others - Elevator Pitch

UNIT-II:

CALL

1. **Activity:** Listening for information
2. Listening comprehension
3. **Reading Skills:** Reading comprehension-contextual vocabulary

Oral Communication Lab

1. Participatory Conversation
2. Role Playing in Formal Situations, Situational Dialogues – Two-Way (E. g. Elevator Pitch)
3. Media Etiquette, Conference Etiquette

UNIT-III:

CALL

1. **Phonetics:** Errors in Pronunciation, Neutralizing Mother Tongue Influence
2. **Listening Skills:** Listening for Gist
3. **Reading Skills:** SQ3R Method, Inferring

Oral Communication Lab

1. Describing Objects / Situations/ Places, People, Events,
2. Process Description

UNIT-IV:

CALL

1. **Listening Skills:** Techniques for Listening –Listening for Specific Details
2. **Reading Skills:** Making inferences

Oral Communication Lab

1. Story Telling; Story STAR, Sequencing, Creativity
2. Telling and Retelling Stories- Collage

UNIT-V:

CALL

1. **Listening Skills:** Listening for Evaluation, Writing the Summary
2. **Prompt Engineering:** Generating Appropriate Prompts, Keyword Extraction
3. Definition of a Technical Term; System Flow

Oral Communication Lab

1. Report Presentation
2. Short Presentation

(25ES2CS101) PROGRAMMING FOR PROBLEM SOLVING LABORATORY

TEACHING SCHEME		
L	T/P	C
0	2	1

EVALUATION SCHEME					
D-D	PE	LR	CP	SEE	TOTAL
10	10	10	10	60	100

COURSE OBJECTIVES:

- To gain a working knowledge of C programming to write modular, efficient and readable C programs by Identifying the structural elements and layout of C source code
- To declare and manipulate single and multi-dimensional arrays of the C data types and derived data types like structures, unions
- To use functions from the portable C library and to describe the techniques for creating program modules using functions and recursive functions · To manipulate character strings in C programs. Utilize pointers to efficiently solve problems

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Design, Develop and debug programs by applying suitable C language constructs

CO-2: Implement solutions using arrays, strings, pointers, and user-defined data types

CO-3: Apply modular programming principles and handle data through file operations

CO-4: Perform low level operations for interfacing with memory

CO-5: Translate problem statements into executable code through hands-on programming practice

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3
CO-1	3	3	3	1	2	-	-	1	2	2	-	-	3	-
CO-2	3	3	3	1	2	-	-	1	2	2	-	-	3	-
CO-3	3	3	3	2	2	1	1	2	2	2	1	-	3	-
CO-4	3	3	3	2	2	1	1	2	2	2	1	-	3	-
CO-5	3	3	3	2	2	1	1	2	2	2	2	-	3	-

LIST OF EXPERIMENTS:

WEEK 1:

- Programs on input, output statements
- Programs on various operators
- Programs on expression evaluation

WEEK 2:

- a) Program that converts one given data type to another using auto conversion and casting. Take the values from standard input.
- b) Programs on conditional statements- Simple if, if-else, Nested if-else, Else-if ladder, switch case

WEEK 3:

- a) Programs on simple loops- while, for, do. while
- b) Programs on Nested loops- while, for, do. while
- c) Programs to understand goto, break, continue

WEEK 4:

- a) Programs on 1-D arrays
- b) Programs on linear, binary searching
- c) Programs on bubble, selection and insertion sorting

WEEK 5:

- a) Programs on 1-D strings
- b) Programs using string handling functions

WEEK 6:

- a) Programs on 2-D arrays
- b) Programs on 2-D strings

WEEK 7:

- a) Programs on user defined functions
- b) Programs on passing arrays and strings to functions

WEEK 8: Internal Lab Exam -1**WEEK 9:**

- a) Programs on recursion
- b) Programs on structures – simple structure, array of structures, array within structure, nested structure
- c) Programs on Unions

WEEK 10:

- a) Programs on pointers to variables
- b) Programs on pointers to arrays(1-D, 2-D)

WEEK 11:

- a) Program to understand call by value and call by address
- b) Programs on pointers to strings
- c) Programs on pointers to structure
- d) Programs using malloc, calloc , realloc, free

WEEK 12:

- a) Programs on macros, file inclusion, enum , typedef
- b) Programs on sequential file accessing

WEEK 13:

- a) Programs on error handling functions in files
- b) Programs on Random file accessing
- c) Programs on command line arguments

WEEK 14: Lab Internal Exam -2**TEXT BOOKS:**

- 1. The C Programming Language, Brian W. Kernighan and Dennis M. Ritchie, Prentice Hall of India
- 2. C Programming and Data Structures, B. A. Forouzan and R. F. Gilberg, 3rd Edition, Cengage Learning
- 3. C: The Complete Reference, Herbert Schildt, 4th Edition, McGraw-Hill

0	2	1

EVALUATION SCHEME					
D-D	PE	LR	CP	SEE	TOTAL
10	10	10	10	60	100

COURSE OBJECTIVES:

- To know the different popular manufacturing process
- To gain a good basic working knowledge required for the production of various engineering products
- To provide hands on experience about use of different engineering materials, tools, equipment and processes those are common in the engineering field
- To identify and use marking out tools, hand tools, measuring equipment and to work to prescribed tolerances

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Understand various types of manufacturing processes

CO-2: Fabricate/make components from wood and steels through hands on experience

CO-3: Understand different machining processes like turning, drilling, tapping, etc.

CO-4: Understand electrical and electronic components and their assembly

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

LIST OF EXPERIMENTS:

1. TRADES FOR EXERCISES:

- Carpentry:** Cross lap joint, Mortise & tenon joint
- Fitting:** L-fitting, Square fitting
- Tin smithy:** Rectangular tray, Rectangular scoop
- Arc welding:** Lap joint, Butt joint
- House Wiring:** Single lamp connection, Staircase connection
- Black smithy:** Round to Square, U-Hook
- Machine shop:** Step turning on lathe, Drilling & tapping

2. TRADES FOR DEMONSTRATION:

Plumbing, 3D printing, Power tools in construction and wood working.

TEACHING SCHEME		
L	T/P	C
2	1	3

EVALUATION SCHEME				
SE	CA	ELA	SEE	TOTAL
30	05	05	60	100

COURSE PRE-REQUISITES: Mathematical Knowledge at Pre-University level

COURSE OBJECTIVES:

- To learn methods of solving the differential equations of first and higher order
- To learn moncept, properties of Laplace transforms
- To learn solving ordinary differential equations using Laplace transforms techniques
- To learn the physical quantities involved in engineering field related to vector valued functions
- To know the basic properties of vector valued functions and their applications to line, surface and volume integrals

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Identify whether the given differential equation of first order is exact or not

CO-2: Solve higher differential equation and apply the concept of differential equation to real world problems

CO-3: Use the Laplace transforms techniques for solving ODE's

CO-4: Evaluate the line, surface and volume integrals and converting them from one to another

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3
CO-1	3	3	1	2	1	-	-	-	-	-	2	2	-	-

CO-4	3	2	2	2	1	-	-	-	-	-	1	2	-	-

UNIT-I:

First Order ODE: Exact differential equations – Equations reducible to exact differential equations – linear and Bernoulli's equations – Orthogonal Trajectories (only in Cartesian Coordinates). Applications: Newton's law of cooling – Law of natural growth and decay.

UNIT-II:

Ordinary Differential Equations of Higher Order: Second order linear differential equations with constant coefficients: Non-Homogeneous terms of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x , $e^{ax} V(x)$ and $x V(x)$ – Method of variation of parameters.

UNIT-III:

Laplace Transforms: Laplace Transforms: Laplace Transform of standard functions – First shifting theorem – Laplace transforms of functions multiplied by 't' and divided by 't' – Laplace transforms of derivatives and integrals of function – Evaluation of integrals by Laplace transforms – Laplace transform of periodic functions – Inverse Laplace transform, convolution theorem (without proof). Applications: solving Initial value problems (Linear ODEs with constant coefficients) by Laplace Transform.

UNIT-IV:

Vector Differentiation: Vector point functions and scalar point functions – Gradient – Directional derivatives -Divergence and Curl - Solenoidal and Irrotational vectors - Scalar potential functions – Vector Identities (without proof).

UNIT-V:

Vector Integration: Line, Surface and Volume Integrals. Theorems of Green, Gauss and Stokes (without proofs) and their applications.

TEXT BOOKS:

1. Higher Engineering Mathematics, B. S. Grewal, 36th Edition, Khanna Publishers, 2010
2. Advanced Engineering Mathematics, R. K. Jain and S. R. K. Iyengar, 5th Edition, Narosa Publications, 2016
3. Higher Engineering mathematics, B. V. Ramana, 11th Reprint, Tata McGraw-Hill, 2010

COURSE PRE-REQUISITES: General Chemistry and Basic Mathematics

COURSE OBJECTIVES:

- To analyze the quality of water for sustainable living
- To imbibe the conceptual knowledge of electrochemical processes and corrosion science
- To outline the importance of non-conventional energy sources and portable electronic devices
- To acquire knowledge about polymer science and its applications in various fields
- To recognize the significance of analytical techniques and advanced functional materials in engineering, industrial, environmental, and biomedical applications

COURSE OUTCOMES: After completion of the course, the student should be able to
CO-1: Assess the specification of water regarding its usage in domestic & Industrial scenarios

CO-2: Interpret electrode potentials and predict the suitable corrosion control methods in safeguarding the structures

CO-3: Recognize the transformations in energy sources & battery technology

CO-4: Analyze the efficacy of polymers in diverse applications

CO-5: Identify the use of spectroscopic techniques and advanced functional materials in varied applications

COURSE ARTICULATION MATRIX:

CO-5	3	2	1	1	1	1	1	1	1	1	2	1	-	-

UNIT-I:

Water and its Treatment: Introduction- Hardness, types, degree of hardness and units – numerical Problems. Estimation of hardness of water by complexometric method. Potable water and its specifications (WHO) – Steps involved in the treatment of potable water – screening, sedimentation, coagulation, filtration and disinfection by chlorination and break-point chlorination.

Boiler Troubles: Scales, Sludges, Internal treatment of boiler feed water – Calgon conditioning, Phosphate conditioning, Colloidal conditioning. External treatment methods – Softening of water by Ion-exchange process. Membrane Separation –

Types of membranes [Microfiltration (MF), Ultrafiltration (UF), Nanofiltration (NF)], advantages and applications. Desalination of brackish water – Reverse osmosis.

UNIT-II:

Electrochemistry and Corrosion: Introduction – Electrochemical cell & galvanic cell, electrode potential, standard electrode potential, Nernst equation (no derivation). Types of electrodes – Reference electrodes – Construction, working principle, advantages, limitations and applications of Primary reference electrode (Standard Hydrogen Electrode – SHE), Secondary reference electrode (Calomel electrode) and Ion-selective electrode (Combined glass electrode).

Corrosion: Introduction – Definition, causes and effects of corrosion, Theories of corrosion – chemical and electrochemical theories of corrosion. Types of corrosion – galvanic, waterline and pitting corrosion. Factors affecting rate of corrosion – nature of metal (position, passivity, purity, areas of anode and cathode) & nature of environment (temperature, pH, humidity). Corrosion control methods – Cathodic protection Method – Sacrificial anode and impressed current cathodic protection methods.

UNIT-III:

Energy Sources and Battery Technology:

Fuels: Introduction and characteristics of good fuel, classification based on physical state.

Fossil Fuels: Petroleum – Refining of Crude oil, Cracking – Types of cracking – Moving bed catalytic cracking. Synthetic Fuels: Fischer-Tropsch process.

Gaseous fuels: Composition and uses of LPG, CNG and Hythane. Green Hydrogen (generation by water electrolysis – PEM, Alkaline, Solid Oxide).

Batteries: Introduction – Classification of batteries – Primary, secondary, reserve batteries and fuel cells (differences and examples). Construction, working and applications of Zn-air (primary battery) and Lithium-ion battery (secondary battery), Characteristic features and Advantages of Metal ion batteries (Sodium Ion Battery). Fuel Cells – Construction and applications of Proton Exchange Membrane Fuel Cell (PEMFC).

UNIT-IV:

Polymers: Definition – Classification of polymers – Types of polymerizations – Addition and condensation polymerization, differences between thermoplastics and thermosetting plastics. Plastics, Elastomers and Fibers: Synthesis, properties and applications of Teflon, Buna-S and Kevlar.

Fiber Reinforced Plastics (FRPs): Classification, features and applications.

Conducting Polymers: Definition, classification and applications.

Shape Memory Polymers: Definition, classification and applications.

Biodegradable polymers: Introduction – Definition features & applications of Polylactic acid (PLA).

UNIT-V:

Spectroscopic Applications and Advanced Functional Materials: Interpretative spectroscopic applications of UV-Visible spectroscopy for analysis of pollutants in dye industry, IR spectroscopy in night vision – security, Pollution Under Control – CO sensor (Passive Infrared detection), Raman spectroscopy (application) – Tumour detection in medical applications.

Advanced Functional Materials: Smart materials - Shape Memory Alloys (Example: Nitinol), Nanomaterials – Characterization by STM & AFM.

Self-healing Materials: Definition, working principle and applications.

Characteristic Features of Biosensing Materials: Example: Amperometric Glucose monitoring sensor.

30	05	05	60	100

COURSE PRE-REQUISITES: Advanced Engineering Physics

COURSE OBJECTIVES:

- To understand the construction, principles and characteristics of various semiconductor devices
- To study structure, principles and parameters of BJT and it's biasing
- To have familiarity with h-parameter models of transistor
- To understand the construction, principles and characteristics of various FETs and MOSFETs
- To study the working principal along with structure of various special purpose devices

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Analyze the electrical characteristics and models of semiconductor diodes and apply them in rectifier and clipping circuits

CO-2: Evaluate the operation and configurations of Bipolar Junction Transistors (BJTs) and appreciate the need for biasing

CO-3: Analyze transistor amplifier circuits using h-parameter models and assess performance for various configurations

CO-4: Analyze the structure, working, and characteristics of JFETs, MOSFETs, and advanced devices like FinFETs and CNTFETs, and compare modern device technologies

CO-5: Analyze the characteristics of special purpose devices

COURSE ARTICULATION MATRIX:

CO-5	3	2	2	1	-	-	-	-	-	-	-	3	-	2

UNIT-I:

Diode Characteristics: PN junction diode – V-I characteristics, Diode resistance and capacitance, Diode models (Ideal, Simplified, Piecewise Linear),

Diode Applications: Rectifiers – Half-wave, Full-wave (Center-tap and bridge), Capacitor filter for rectifiers, Clippers and clampers, Zener diode – V-I characteristics and voltage regulation.

UNIT-II:

Bipolar Junction Transistor (BJT): Structure and working principle of BJT, Current components and transistor action, Configurations: Common Base (CB), Common Emitter (CE), Common Collector (CC), Input and output characteristics, Determination of h-parameters from transistor characteristics.

BJT Biasing: Need for biasing and stabilization, Load line and operating point, Biasing techniques: Fixed bias, Collector-to-base bias, Voltage divider bias, Stability factors and thermal runaway.

UNIT-III:

Transistor Amplifiers: Transistor as a small-signal amplifier, h-parameter equivalent circuit, CE, CB, CC amplifier analysis using h-parameters, Approximate CE model – with and without emitter bypass capacitor.

UNIT-IV:

Field Effect Transistors: JFET: Structure, operation, and characteristics,

MOSFET: Enhancement and Depletion modes – Structure, operation, and characteristics,

Advanced MOSFETs: FinFETs - 3D structure, Scaling advantages, CNTFETs - Structure, ballistic transport, fabrication, Comparison: CMOS vs. FinFET vs. CNTFET.

UNIT-V:

Special Purpose Devices: Principle of Operation of – SCR, Tunnel Diode, Varactor Diode, Photo Diode, Photo Transistor, Solar Cell, LED and Schottky Diode.

- To introduce various sorting techniques
- To demonstrate operations of linear and non-linear data structure
- To develop an application using suitable data structure

COURSE OUTCOMES: After completion of the course, the student should be able to
CO-1: Understand basic concepts of data structures and analyze computation complexity

CO-2: Solve the given problem using linear data structures

CO-3: Apply linear data structures to implement various sorting techniques

CO-4: Execute the given problem using non-linear data structures

CO-5: Implement dictionaries using hashing with basic operations and collision handling

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3

CO-5	3	3	3	2	3	2	2	2	3	3	1	-	3	-

UNIT-I:

Introduction to Data Structures: Abstract Data Types (ADT), Asymptotic Notations.

Linear Data Structures: Limitations of Array, Stacks -Stack ADT and its operations

Applications of Stacks: Recursion, Infix to postfix conversion, Postfix evaluation.

UNIT-II:

Linear Data Structures: Queues -Queue ADT, Types of Queues: Linear Queue, Circular Queue, Double ended queue, operations on each types of Queues

Linked Lists: Singly linked lists, Representation in memory, Operations: Traversing, Searching, insertion, Deletion from linked list, Linked representation of Stack and Queue.

UNIT-III:

Doubly Linked List, Circular Linked Lists: Operations-Traversing, Searching, insertion, Deletion.

Sorting: Objective and properties of different sorting algorithms: Quick Sort, Merge Sort, Radix Sort, Heap Sort.

UNIT-IV:

Trees: Basic Tree Terminologies, Different types of Trees: Binary Tree, Binary Search Tree, AVL Tree; Tree Operations on each of the trees and their algorithms with time complexities.

Priority Queue: Definition, Operations and their time complexities.

B-Trees: Definition, Operations.

UNIT-V:

Dictionaries: Definition, ADT, Linear List representation, operations- insertion, deletion and searching, Hash Table representation, Hash Functions-Division Method, Multiplication Method, Mid-Square Method, Folding Method, Collision Resolution Techniques-Separate Chaining, open addressing-linear probing, quadratic probing, double hashing, Rehashing.

Graphs: Graph terminology –Representation of graphs –Graph Traversal: BFS (breadth first search) –DFS (depth first search) –Minimum Spanning Tree.

TEXT BOOKS:

(25ES1EE103) INTRODUCTION TO ELECTRICAL ENGINEERING

TEACHING SCHEME		
L	T/P	C
3	0	3

EVALUATION SCHEME				
SE	CA	ELA	SEE	TOTAL
30	05	05	60	100

COURSE PRE-REQUISITES: Mathematics, Physics

COURSE OBJECTIVES:

- To analyze transient response of RL, RC and RLC circuits using differential equations and Laplace transforms
- To understand concepts of self and mutual inductance in magnetic circuits
- To study the construction, operation and performance of transformers
- To learn the principles and characteristics of DC generators and motors
- To explain the operation and performance of AC machines and special machines

COURSE OUTCOMES: After completion of the course, the student should be able to
CO-1: Analyze the transient behavior of first- and second-order circuits under different excitations

CO-2: Apply the concepts of self and mutual inductance in solving magnetic circuit problems

CO-3: Evaluate the performance of transformers using equivalent circuit and phasor diagrams

CO-4: Explain the operation and characteristics of DC generators and motors

CO-5: Compare the performance of induction, synchronous and special machines

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3
CO-1	3	3	3	3	3	3	2	1	2	1	1	3	-	-
CO-2	3	3	3	3	3	2	1	1	1	1	1	2	-	-
CO-3	3	3	3	3	3	2	1	1	1	1	3	1	-	-

CO-5	3	3	3	3	3	2	1	1	1	1	3	1	-	-

UNIT-I:

Transient Analysis (First and Second Order Circuits): Transient Response of RL, RC and RLC Circuits for DC excitations, Initial Conditions, Solution using Differential Equations approach and Laplace Transform Method. Transient Response of RL and RC Circuits for AC excitations.

UNIT-II:

Magnetic Circuits: Faraday's laws of electromagnetic induction – concept of self and mutual inductance – dot convention – coefficient of coupling; Analogy between electric and magnetic circuits; Series and Parallel Magnetic Circuits- Problems.

UNIT-III:

Transformers: Principle of Operation, Types, Construction, EMF Equation, Transformer on No Load and Load, Phasor Diagram, Equivalent Circuit, Losses, Efficiency and Regulation of Transformer, Simple Problems.

UNIT-IV:

DC Machines

DC Generators: Principles of Operation, construction, EMF equation, Types of Generators, Magnetization Characteristics of DC Generators.

DC Motors: Principle, Back EMF, Types of DC Motors, Speed Control of DC Shunt Motor- Flux and Armature Voltage control methods, Losses and Efficiency.

UNIT-V:

AC Machines and Special Machines

Three Phase Induction Motor: Principle of operation -types, Torque-Slip characteristics.

Synchronous Machines: Principle of operation of Alternator, Types, Principle of operation of Synchronous Motor.

Special Machines: Principle of Servo Motor, Stepper Motor and BLDC Motor.

COURSE OBJECTIVES:

- To understand the importance of engineering curves
- To learn to use the orthographic projections for points, lines and planes
- To understand the projections of solids in different positions
- To learn the importance of isometric projections and its conversions

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Apply the concepts of engineering curves and its construction using AutoCAD

CO-2: Solve the problems of projections of points, lines, planes in different positions using AutoCAD

CO-3: Solve the problems of projections of solids using AutoCAD

CO-4: Solve the problems on Conversion of Isometric views to Orthographic Views & Orthographic to Isometric Views using AutoCAD

COURSE ARTICULATION MATRIX:

Introduction to AutoCAD Software:

The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line, The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.

UNIT-I:

Introduction to Engineering Drawing: Principles of Engineering drawing and their significance and Conventions

Engineering Curves: Construction of Ellipse, Parabola and Hyperbola – General and Special methods; Cycloidal curves- Epicycloids and Hypocycloids

UNIT-II:

Orthographic Projections, Projections of Points & Straight Lines: Principles of Orthographic Projections – Conventions; Projections of Points in all positions; Projections of lines inclined to both the planes

UNIT-III:

Projections of Planes: Projections of Planes- Surface Inclined to both the Planes

UNIT-IV:

Projections of Regular Solids: Projections of Regular Solids inclined to both the Planes
– Prisms, Pyramids, Cylinder and Cone

UNIT-V:

Isometric Projections: Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and Compound Solids
Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions

EVALUATION SCHEME					
D-D	PE	LR	CP	SEE	TOTAL
10	10	10	10	60	100

COURSE PRE-REQUISITES: Basic Knowledge of Volumetric Analysis and Mathematics

COURSE OBJECTIVES:

- To understand the preparation of standard solutions and handling of instruments
- To determine and evaluate the water quality
- To measure physical properties like absorption of light, surface tension, pH, conductance, and viscosity of various liquids
- To conduct and collect the experimental data using different laboratory techniques
- To summarize the data and find the applicability to real world scenario

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Learn and apply the basic laboratory methodologies for the preparation of the standard solutions and handling of instruments

CO-2: Estimate the ions / metal ions present in domestic and industrial water

CO-3: Utilize the instrumental techniques to assess the physical properties of oils and water

CO-4: Analyze the experimental data to predict solutions for complex engineering problems

CO-5: Apply the skills gained to address societal issues related to real world scenario

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3

CO-5	3	2	2	2	1	2	1	1	1	1	2	1	-	-

LIST OF EXPERIMENTS:

VOLUMETRIC ANALYSIS:

1. Estimation of hardness of water by complexometric method using EDTA.
2. Determination of chloride content in the given sample water using Argentometric method.
3. Determination of Iron using Potassium Dichromate.

COLORIMETRY:

4. Estimation of copper present in the given solution by colorimetric method.

CONDUCTOMETRY:

5. Conductometric titration of Acid vs Base.
6. Conductometric titration of mixture of strong acid and weak acid by strong base.

pH METRY:

7. Titration of Acid vs Base using pH metric method.
8. Determination of viscosity of sample oil by Redwood Viscometer-I.
9. Estimation of acid value of given lubricant oil.
10. Determination of surface tension of a liquid by drop method using Stalagmometer.

PREPARATIONS:

11. Preparation of Bakelite.
12. Preparation of Nylon-6,6.
13. Determination of rate of corrosion of mild steel in the presence and absence of inhibitor.

14. VIRTUAL LAB EXPERIMENTS / CBP:

- Construction of advanced Fuel cell and it's working.
- Smart materials for Biomedical applications
- Batteries for electrical vehicles.
- Functioning of solar cell (materials used) and its applications.

TEXT BOOKS:

1. Laboratory Manual on Engineering Chemistry, S. K. Bhasin and Sudha Rani, Dhanpat Rai Publications
2. College Practical Chemistry, V. K. Ahluwalia, Sunitha Dhingra, Adargh Gulati, University Press
3. Practical Chemistry, Dr. O. P. Pandey, D. N. Bajpai, and Dr. S. Giri, S. Chand

COURSE PRE-REQUISITES: Advanced Engineering Physics

COURSE OBJECTIVES:

- To know the characteristics of various active devices
- To verify the applications of semiconductor devices

COURSE OUTCOMES: After completion of the course, the student should be able to

CO1: Analyze the V-I characteristics of semiconductor devices such as diodes, BJTs, and FETs

CO2: Design and evaluate basic rectifier, clipper, clamper, and voltage regulation circuits

CO3: Demonstrate biasing techniques for BJTs and determine their operating point using DC load line analysis

CO4: Design and analyze transistor amplifier in CE configuration

COURSE ARTICULATION MATRIX:

(Correlation of Course Outcomes with Program Outcomes and Program Specific Outcomes using mapping levels 1 = Slight, 2 = Moderate and 3 = Substantial)

CO	PROGRAM OUTCOMES (PO)											PROGRAM SPECIFIC OUTCOMES (PSO)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PSO-1	PSO-2	PSO-3
CO-1	3	-	2	3	1	3	-	-	-	-	-	3	-	2
CO-2	2	-	-	2	1	3	-	-	-	-	-	3	-	2
CO-3	-	1	-	2	2	-	-	-	-	-	-	3	-	2
CO-4	-	-	2	-	-	2	-	-	-	-	1	3	-	2

LIST OF EXPERIMENTS:

Simulate and implement the following

- The V-I characteristics of a PN junction diode in forward and reverse bias to determine cut-in voltage and dynamic resistance.
- The full-wave centre-tapped rectifier without and with capacitor filter to analyze waveform smoothing and ripple reduction in DC power supply design.
- Reverse biased characteristics of Zener diode and Zener diode-based voltage regulator to study voltage stabilization against varying supply voltages and load resistances.
- Clipper and clamper circuits to observe waveform shaping through positive, negative and biased configurations (added this new experiment according to theory).
- The BJT in common emitter configuration to determine input/output resistance and current gain from the input and output characteristics.

6. The BJT in common base configuration to determine input/output resistance and current gain from the input and output characteristics.
7. Design, the fixed bias and voltage divider bias circuits to establish a stable operating point for a BJT amplifier and study DC load line behavior(added this).
8. BJT operation as a switch and small-signal amplifier(added) to understand its dual functionality in digital and analog applications.
9. Common emitter amplifier with and without emitter bypass capacitor to analyze the effect on voltage gain and signal amplification(added).
10. The output and transfer characteristics of a JFET to determine parameters such as pinch-off voltage, drain resistance, and transconductance.
11. The transfer and output characteristics of an enhancement-mode NMOS transistor to analyze threshold voltage, drain current, and switching behavior

LIST OF EXPERIMENTS:

WEEK 1:

Implement Stack using Array

WEEK 2:

- Program to convert infix expression to postfix expression.
- Program to postfix evaluation.

WEEK 3:

Implement the following

- Linear Queue using Array
- Circular Queue using Array

WEEK 4:

Implement Deque using Array

WEEK 5:

Implement Single Linked List operations

WEEK 6:

Implement following

- a) Circular Linked List Operations b) Double Linked List Operations

WEEK 7:

Implement following

- a) Stack using Linked List b) Queue using Linked List

WEEK 8:

Lab Internal – 1

WEEK 9:

- a) Implement Priority Queue

- b) Implement Double ended Queue using Double Linked List

WEEK 10:

Implement following sorting techniques

- a) Merge b) Heap c) Quick d) Radix

WEEK 11:

Implement BST operations

WEEK 12:

Implement following Graph traversals

- a) BFS b) DFS

WEEK 13:

Implement following Hashing Techniques

- a) Separate Chaining b) Linear Probing c) Quadratic Probing

WEEK 14:

Internal Lab – 2

COURSE PRE-REQUISITES: Basic knowledge on environmental issues

COURSE OBJECTIVES:

- To recognize the principles of environment
- To identify the sources and causes of Environmental Pollution
- To analyze the causes of climate change and identify climate change mitigation and adaptation technologies
- To list out the benefits in creating circular economy and sustainability
- To emphasize the Environmental conventions, policies and regulations

COURSE OUTCOMES: After completion of the course, the student should be able to

CO-1: Gain knowledge about principles of Environment and allied problems

CO-2: Identify the causes and suggest remedial measures for Environmental Pollution

CO-3: Appraise the mitigation measures and adaptation technologies related to climate change

CO-4: Familiarize with the importance of circular economy towards sustainability

CO-5: Relate and implement environmental policies and regulations

COURSE ARTICULATION MATRIX:

MODULE 1:

Introduction to Environmental Science: Importance and Scope of Environmental Science. Overview of Environment & its components. Ecosystem function and uses. Biodiversity – Types and Values.

MODULE 2:

Synergy With Environment: Relationship between environmental science & society – Influence of Industry & infrastructure on environment (Specific case studies). Sources, Impacts and prevention of air, water and soil pollution.

MODULE 3:

Climate Change: Science behind climate change – factors responsible for climate change, Role of greenhouse gases – Global temperature rise & its impact on environment & human health. Carbon footprint – Briefing on Paris agreement, Identify

key sectors for low carbon footprint. Climate change mitigation & adaptation strategies.

MODULE 4:

Moving Towards Sustainability: EIA and EMP - importance, Sustainable agriculture – Importance of Organic farming and hydroponics. Role of AI & IOT for efficient management of environmental issues – Health, air, water, and soil. Sustainable living practices – Principles and methods (Linear Economy vs circular economy). Green Buildings.

MODULE 5:

Policies and Regulations: International conventions: Montreal Protocol, COP15, Kyoto protocol (Salient Features). National Environmental Policies – Salient features of EPA act, Air act, Water Act, Forest and Wildlife act. National Green Tribunal Act (2010)- Features and Significance. Extended producer responsibility. Innovative approaches to waste management: Plastic, tyre and batteries.
